

Maintains the fire performance of partitions

Fireclamp Electrical Box Protectors

Fireclamp Electrical Box Protectors (Putty Pads) are designed to reinstate the fire resistance of partitions when fitted with electrical socket and switch boxes. Made from silicone-based intumescent polymer with additional fire resistant additives they are non-setting and mouldable for quick and easy installation.

Key features and benefits

- Independently fire tested and assessed to the requirements of EN 1363-1: 1999 and EN 1366-3: 2009 providing up to 2 hours fire resistance
- Tested with sockets/switches positioned back to back and in uninsulated partitions
- Selection of pad sizes to suit single and double socket and switch boxes
- Quick release protective paper facings to make handling easy
- Can be fitted to either inside or to the back of boxes for maximum flexibility
- Easy to install by hand without the need for specialist tools
- Non-setting to allow for future modification

Typical applications

- Socket and switch boxes in partition walls between hotel bedrooms
- Similar boxes fitted to fire compartmenting walls separating rooms from corridors and other circulation spaces
- Retro-fitting to socket and switch boxes in existing fire separating partitions currently at risk of failure should a fire occur

Testing and certification

- Fire testing to EN 1366-3: 2009 providing up to 2 hours fire resistance to plastic socket and switch boxes

Note: Whilst the product has been fire tested to the requirements of the latest harmonised European fire test standard it is currently not possible to CE mark such products.

For detailed seal specifications please refer to technical data sheet.

Since the product is applied under circumstances beyond our control, Abesco Fire Limited can accept no direct or consequential liability whether in contract or in tort, for the interpretations of such recommendations and reserves the right to modify the recommendations as necessary.
